**DID YOU KNOW...** The Safe Drinking Water Act requires that once every five years the EPA issue a list of unregulated contaminants to be monitored by public water systems. The fifth Unregulated Contaminant Monitoring Rule (UCMR 5) requires sample collection for 30 chemical contaminants between 2023 and 2025. The data collected under UCMR 5 improves understanding of the prevalence and amount of 29 per- and polyfluoroalkyl substances (PFAS) and lithium in the nation's drinking water systems. The results show Boulder City drinking water falls below EPA levels for PFAS. (There is no EPA standard set for lithium, a natural-occurring mineral.) The findings for Boulder City can be found at [www.bcnv.org/UCMR](http://www.bcnv.org/UCMR).
