## Major Upgrades to Enhance Safety, Mobility on Nevada Way

### *Businesses Open during Reconstruction*

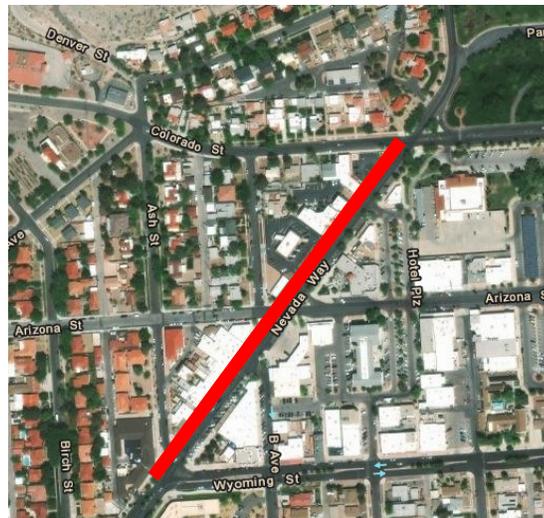

City Council voted last month to approve the Nevada Way Reconstruction project. Their approval comes after City staff held more than two dozen public outreach efforts regarding parking and infrastructure changes on Nevada Way, from Wyoming to Colorado Street. The priorities of this project, known as Option 2A, include enhancing traffic safety, accessibility and circulation, and multimodal usability while supporting local businesses and preserving community character. Businesses will remain open during the reconstruction.

City staff aligned the project with the time of year business owners say is slowest for them due to heat and fewer visitors: July through September. Crews are scheduled to start work on July 6, 2025 at 10:00 p.m., weather permitting. During the reconstruction period, expect traffic detours during the hours of 10 p.m. to 6 a.m. (weekends excluded) along that stretch of Nevada Way.

### What's planned:

- **Street Rehabilitation** – Replace 23-year old asphalt that is in poor condition due to wear from traffic and extreme weather.
- **Infrastructure Improvements** - Replace 50+ year old water services with 18 copper water service lines (that will meet current standards); install 21 backflow prevention devices (to protect the water distribution system); and replace two mainline water valves. These upgrades will better protect the water distribution system. By doing these improvements while the street is under reconstruction, the City saves money, as well as future street closures and utility repairs.
- **Improving Access and Walkability for All** - Provides a dedicated walkway for pedestrian movement past businesses with outdoor seating and display items. Allows sidewalk extensions on both sides to meet ADA/PROWAG (Public Right-of-Way Accessibility Guidelines) standards. Updated ramps and decorative crosswalks are planned.
- **Restriping** - Code-compliant parking spaces will include angled parking on the north side of the street and parallel parking on the south side. Three additional accessible parking spaces will be added (bringing the total to six). Dedicated motorcycle parking.

Once complete, an additional 29 vehicle parking spaces will be created in the vicinity. The estimated completion date is September 25, 2025. The project is funded by the Regional Transportation Commission of Southern Nevada and the Utility Fund. Thank you for your patience throughout the project.

Reconstruction is scheduled July 6 through September 25, 2025 on Nevada Way, from Wyoming Street to Colorado Street.

## Annual Water Quality Consumer Confidence Report Released

The City of Boulder City believes it is essential to provide all the facts about Southern Nevada's drinking water to our customers. The Water Quality Consumer Confidence Report, which is issued annually, includes test results, a source water analysis, an overview of the treatment process and other valuable information relating to the quality of our municipal water supply. The 2025 Report is published in accordance with the federal Safe Drinking Water Act, which establishes drinking water standards and requires purveyors to provide water quality information to their customers.

The sources of drinking water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals, and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. This water may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. To ensure tap water is safe to drink, the EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons should seek advice from their healthcare providers about drinking water.

In 2024, 14 regulated contaminants were detected in Boulder City's drinking water. However, these contaminants were all at allowable levels based on the Safe Drinking Water Act standards and no health violations were reported. Additionally, one unregulated contaminant was detected. Unregulated contaminant monitoring helps the U.S. Environmental Protection Agency (EPA) determine where certain contaminants occur and whether these contaminants should be regulated in the future.

Some customers choose to purchase water filtration devices to improve the aesthetics of their home drinking water. All home water treatment devices require periodic maintenance. The majority of water quality complaints received by the City are due to private equipment and private plumbing.

Visit [www.bcnv.org/WQCCR](http://www.bcnv.org/WQCCR) to view the complete 2025 Report and learn more about your drinking water. If you would like a paper copy mailed to your home, email [utilities@bcnv.org](mailto:utilities@bcnv.org) with subject line "2025 CCR Request" or call (702) 293-9200.
